

0 Level :Web Designing & Publishing

Chapter 2 : Editors

Objective:

After completing this unit, learner will be able to

- Use different editors available for writing code.
- Understand working of editors.

HTML Editors

- An HTML editors is a program for editing HTML, the markup of a web page.
- To create an HTML document, you need a HTML editor.
- There are two types of HTML editors.
 - Text Editor
 - WYSIWYG Editor

Text Editor

- *Text editors use HTML tags to create a web page. If you are using text editor it is required you have proper knowledge of HTML commands.*
- *Examples of text editors*
 - *Notepad*
 - *WordPad*
 - *Vi , Vim*
 - *Notepad++*
 - *Sublime Text*
 - *Net beans*

WYSIWYG Editors

- WYSIWYG stands for What You See Is What You Get.
- This type of editor allow you to create a web page without the use of HTML tags.
- The content seen during the editing phase closely resembles the final web page.
- Examples of WYSIWYG editors:
 - Microsoft Front page
 - Adobe Dreamweaver

Notepad

- Notepad is a generic text editor included with all versions of Microsoft Windows that allows you to create, open, and read plaintext files.
- It does not support selection based formatting i.e. If you change the style, size of then it will apply in complete text.

Notepad ++

- Notepad++ is a free text editor for Microsoft Windows that provides additional features not found in the standard Windows text editor, Notepad.
- It was first released on November 24, 2003, by developer Dan Ho, and is still in active development.
- Notepad++ is specially designed for editing source code.

Features of Notepad++

- Support of Multiple tab (Multiple document interface)
- Notepad++ is distributed as free software.
- Syntax Highlight
- Auto Indentation
- File Type Recognition
- Sidebar with files of mentioned directory
- Macros
- Plug-in and Packages

Others Popular Editors

- Dream viewer
- Sublime text
- Vi
- Vim
