

Web Designing & Publishing

Chapter : 6

JavaScript and Angular JS Part-2

Angular JS

- Angular JS is a very powerful JavaScript Framework.
- It is used in Single Page Application (SPA) projects.
- It extends HTML DOM with additional attributes and makes it more responsive to user actions.
- AngularJS is open source, completely free, and used by thousands of developers around the world.
- It is licensed under the Apache license version 2.0.

CDN For Angular JS:

- AngularJS is a JavaScript framework written in JavaScript.
- AngularJS is distributed as a JavaScript file, and can be added to a web page with a script tag:

CDN Link

```
<script  
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.6.9/angular.min.js"></  
script>
```

ng-directives

The **ng-app** directive defines an AngularJS application.

The **ng-model** directive binds the value of HTML controls (input, select, textarea) to application data.

The **ng-bind** directive binds application data to the HTML view.

Example

```
<!DOCTYPE html>
<html>
<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.6.9/angular.min.js"></script>
<body>
<div ng-app="">
  <p>Name: <input type="text" ng-model="name"></p>
  <p ng-bind="name"></p>
</div>
</body>
</html>
```

AngularJS Expressions

- AngularJS expressions are written inside double braces: {{ expression }}.
- AngularJS will "output" data exactly where the expression is written:

Example : 1

```
<div ng-app="">  
  <p>My first expression: {{ 5 + 5 }}</p>  
</div>
```

Example : 2

```
<div ng-app="">  
  <p>Name: <input type="text" ng-model="name"></p>  
  <p>{{name}}</p>  
</div>
```

Example 1

```
<div ng-app="" ng-init="myCol='lightblue'">  
<input style="background-color:{{myCol}}" ng-model="myCol">  
</div>
```

AngularJS Modules

- An AngularJS module defines an application.
- The module is a container for the different parts of an application.
- The module is a container for the application controllers.
- Controllers always belong to a module.

Creating a Module

A module is created by using the AngularJS function `angular.module`

```
<div ng-app="myApp">...</div>  
<script>  
var app = angular.module("myApp", []);  
</script>
```
