

0 Level :Web Designing & Publishing

Chapter 7

Photo Editors

Objective:

After completing this unit, learner will be able to

- Use different editors available for image Editing
- Understand different type of image editing
- Working with multiple layers

What is Photo Editing

- Photo editing means an act of altering an image in very simple terminology.
- These images can be digital photographs, illustrations, prints, or photographs on film.
- Photos of models etc. are edited to remove blemishes or make the model "better" or a photo is edited for fixing errors like red eye, contrast, brightness, etc.
- Photo editing is also used to make completely new images

Photo-editing software

Photo-editing software's are software programs used to manipulate and enhance images, Some Popular Software's are:

Some photo-editing software programs:

- Adobe Photoshop
- Corel Draw
- Microsoft Paint
- Inkscape
- Capture One
- Fotor
- Snappa
- PicMonkey
- Pixlr editor
- Canva
- GIMP
- PhotoPlus
- Paint.NET

Some photo-editing mobile apps:

- PicsArt
- Snapseed
- Edior De Fotos
- Photo Director
- Adobe Lightroom
- PicShot
- Polarr
- InstaSquare
- Enlight

Types of photo editing

- Selection/Resize /Cropping Image
- Improve Colors and tone
- Improving Brightness and Contrast
- Merging (Mixing) Images
- Applying Filters on Images
- Adding Text on Image

Layers in Photoshop

- Layers are used in digital image editing to separate different elements of an image.
- A layer can be compared to a transparency on which imaging effects or images are applied and placed over or under an image.

Photoshop Tools

- **Marquee:** this tool allows you to select an area of an image within a particular shape. The default is rectangle, but there is also an ellipse selection as well as a single row and single column marquee.
- **Lasso:** this tool allows you to select irregular areas of an image. There is also the freehand lasso tool and the magnetic lasso tool (which will find the edge of an element within the image you are trying to select).
- **Crop:** this tool allows you to cut/remove an image to a particular segment.
- **Magic Wand:** the magic wand tool is another tool that you can use to select an area on the screen. It is used when you want to select an area that contains the same colour throughout.

Photoshop Tools

- **Clone Stamp:** this tool takes a sample of an image, which you can then apply over another image or part of the same image. Each stroke of the tool paints on more of the sample. The other tool that can be selected here is the pattern stamp tool, which lets you paint with a pattern. You can select a pattern from the pattern libraries or create your own patterns.
- **Eraser:** this tool allows you to erase parts of your image. You can also select the background eraser tool or magic eraser tool which allow you to erase specific parts of the image.
- **Smudge:** this tool allows you to create an effect similar to the effect caused when working with pencils and you smudge an area of the image with your finger. The companion tools to this tool are the blur tool and the sharpen tool which allow you to blur the focus or sharpen the focus of an area of the image.

Photoshop Tools

- **Hand:** allows you to move an image around the screen to allow access to various parts of the image when the image is too big for the screen.
- **Zoom:** allows you to magnify/de-magnify areas of an image to allow for more detailed work.
- **Text:** this tool allows you to add text to your image. You can also change the orientation of text to the vertical type tool.
- **Gradient:** a gradient allows you to fill an area of an image with a colour range, where the colours gradually run into each other. The other option with this tool is the paint bucket or fill tool, which you would use to fill a selected area of the image with a single colour.

Photoshop Tools

- **Healing Brush:** this tool allows you correct imperfections, causing them to disappear into the surrounding image. You use the healing brush tool to paint with sampled pixels from an image or pattern. The other tool that this button allows you to select is the patch tool. The patch tool lets you repair a selected area with pixels from another area or a pattern.
- **Paint Brush:** this tool is as you would imagine used to paint on an image. There are numerous different brush shapes and sizes that allow the user to create different textures to their image. The other option to this tool is the pencil tool.

THANK YOU
