

Libre Office - Writer

What is word processor?

The application program that is enabling the process of text is called “word processing program” or simply “word processor”. It allows the user to enter, view, edit, manipulate, store and print text material

Example of Word Processor:

- Notepad
- WordPad
- MS-word
- LibreOffice Writer
- PageMaker
- WordStar

Libre Office Writer

- LibreOffice Writer is the **free and open-source** word processor Software.
- Writer is a word processor similar to Microsoft Word.
- Writer can be used **across a variety of platforms**, including Linux, FreeBSD, macOS and Microsoft Windows.

Features of Libre Office Write

- Writer is capable of opening and saving to a number of formats, including OpenDocument (ODT is its default format), Microsoft Word's DOC, DOCX, RTF and XHTML.
- A spelling and grammar checker
- Built-in drawing tools
- Built-in calculation functions
- Mail merge
- Fields and forms

Writer Interface

Element of Writer Window

Title bar: The title bar displays the name of the currently active word document. It also holds same control buttons- minimize, maximize and close.

Menu Bar: Menu bar is located just below the title bar. It has group of command with 11 menu as File, Edit, View, Insert, Format, Style, Table, Form, Tools, Window and Help. These menu allows the user to perform different task.

Tool Bar : Tool bar is a collection of command buttons usually with icon that provide shortcuts to task. It is located just below the menu bar and above the horizontal ruler.

Scroll bar: The scroll bar helps you scroll the content or body of document.

Workspace: The workspace is the area in the document window where you type the text of your document.

Ruler: Showing page width and position of tab, indents columns and margins.

Status bar: The status bar displays information about the currently active document. This includes the page number that you are working, the column and line of the cursor position and so on.

Navigation in Document

Action	Keyboard Shortcuts
Left one character	Left Arrow

To The end of Document	Ctrl+Shift+End
Select All Document	Ctrl+A

Creating New Blank Document

In Write you can create multiple document without closing the previous document file. The default name of write file is Untitled 1.

Step to Create a new Document:

- Go to File Menu -> New -> Text Document
- or Press (**Ctrl+N**)

Creating New Document Using Templates

Template is a set of predefined styles that is used to create new document by using the following method.

Steps:

- Click on File->Template->Manage Template or Press **(Ctrl+Shift+N)**
- Select the desired Template and click on open Button.

Opening an Existing document

- Open Option allows you to open an existing Writer document from either the hard disk or other media attached to the computer.
- Steps:
 - Click the Menu, and then click Open or Press (**Ctrl+O**).
 - In the left pane of the Open dialog box, click the drive or folder that contains the document.
 - In the right pane of the Open dialog box, open the folder that contains the document that you want.
 - Click the document and then click Open.

Opening and saving files on remote servers

- LibreOffice can open and save files stored on remote servers (that is, not on your computer or local area network).
- Keeping files on remote servers allows you to work with the documents using different computers. For example, you can work on a document in the office and also at home or elsewhere.
- Storing files on a remote server also backs up documents, saving data from computer loss or hard disk failure.
- Some servers are also able to check files in and out, thus controlling their usage and access.
- LibreOffice supports many document servers that use well-known network protocols such as **FTP, WebDav, Windows share, and SSH**.
- It also supports popular services like **Google Drive and Microsoft OneNote**, as well as commercial and open source servers that implement the **OASIS CMIS standard**.

Opening file from remote servers

- Opens a document located in a remote file **service**.
- Step:
- File Menu->Open Remote
- Select the service ex: google drive
- Enter the user name and password
- Select the file from list
- Click on open button.

Saving a Document

You can save a document using any of the following commands:

- **Save** – use if you are keeping the document, its current filename and location.
- **Save As** – use to create a new document, or change the filename and/or file format, or save the file in a different location on your computer.
- **Save Remote** – use if your document is already stored in a remote server or will be stored in a remote server.
- **Save a Copy** – use to save a copy of your current document and keep the current document open for more editing.
- **Save All** – use to save all the files open in your current session.

Save Command

- The first time you save a Writer document, you have to assign a name and choose the folder in which to save it.

Steps:

- Click on File Menu and choose save option or Press **(Ctrl+S)** or Click save button from Standard toolbar
- Then Save As dialog box will appear (if you are saving file first time)
- Specify the file name & location
- Click on save button

Save As command

Save as allows you to save the current document under a new file it also allow to save the document with different format and different version of MS-word like ms-word 2003,2007 version, ODF tex Document Template (.ott) and html format etc.

Steps:

- Click on file Menu and choose Save As option or Press (**Ctrl+Shift+S**)
- Then Save As dialog box will appear
- Specify the New file name and chose format from save as drop down list
- Click on save button.

Password protection

LibreOffice provides two levels of password protection: read-protect (file cannot be viewed without a password) and write-protect (file can be viewed in read-only mode but cannot be changed without a password).

Thus you can make the content available for reading by one group of people and for reading and editing by a different group.

Steps:

1. Use File > Save As when saving the document. (You can also use File > Save the first time you save a new document.)
2. On the Save As dialog, select the Save with password option in the lower left corner, and then click Save.

Password protection (Conti..)

3. The Set Password dialog opens .Here you have several choices:

- To **read-protect** the document, type a password in the two fields at the top of the dialog.
- To **write-protect** the document, click the Options button and select Open file read-only in the File Sharing Password section.
- To **write-protect** the document but allow selected people to edit it, select Open file read-only and type a password in the two boxes at the bottom of the dialog.

The image shows a 'Set Password' dialog box with a close button (X) in the top right corner. It is divided into two main sections: 'File Encryption Password' and 'File Sharing Password'. The 'File Encryption Password' section has two text input fields labeled 'Enter password to open' and 'Confirm password'. Below these is a note: 'Note: After a password has been set, the document will only open with the password. Should you lose the password, there will be no way to recover the document. Please also note that this password is case-sensitive.' There is a button labeled 'Options' with a small icon to its left. The 'File Sharing Password' section has a checkbox labeled 'Open file read-only'. Below the checkbox are two text input fields labeled 'Enter password to allow editing' and 'Confirm password'. At the bottom right of the dialog are 'OK' and 'Cancel' buttons.

Step to Save file in Remote Server

Use this command if your document is already stored on a remote server or you want to store it on a remote server.

Step:

- Choose File > Save Remote.
- When the Save As dialog appears, enter or verify the name, type, and location, then click Save.

Closing a Document

- When you want to close the current document without closing the application you can choose close option.

Steps:

- Click on file menu and choose Close Option or Press **(Ctrl+W)**
- If the file is not saved before the close operation, writer display a dialog box confirming the saving of file.

Exit from Writer

- **Exit (Ctrl+Q):** Exit option allows you to quit Writer Application.

Steps:

- Click on file menu and choose Exit option or Press Ctrl+Q or Click on close button on title bar .
- If the file is not saved before the close operation, writer display a dialog box confirming the saving of file.

Undo and Repeat action

Undo option allows to cancel or remove the last changes taken place in the document such as editing, formatting etc.

Steps:

- Click on undo button from quick access toolbar or press (**Ctrl+Z**) from keyboard.

Repeat option allows to repeat the last changes that canceled by undo operation.

Steps:

- Click on repeat Button from Quick access toolbar or press (**Ctrl+Y**) from keyboard.

Selecting text

- Selecting text in Writer is similar to selecting text in other applications. You can swipe the mouse pointer over text or use multiple clicks to select a word (double-click), sentence (triple-click), or paragraph (quadruple-click).
- In addition, you can select non-contiguous items and vertical blocks of text.
- One way to change the selection mode is to use the icon on the Status bar. When you right-click the icon, a context menu displays the options: Standard selection, Extending selection (F8), Adding selection (Shift+F8), and Block selection (Ctrl+Shift+F8). Click on an option to activate it.

Cutting, copying, and pasting text

- Cut-it means moving data originally.
- Copy- it means creating Duplicate of data without moving original data .
- Paste-Paste inserts the current clipboard contents into the new location.

- **With Mouse**

- Select data → Copy → Paste
- Select data → Cut → Paste

- **With keyboard**

For copy & paste

Shift+→ → Ctrl+C ---> Ctrl+V

Shift+→ → Ctrl+x ---> Ctrl+V

Using the Find toolbar

- By default, the Find toolbar is docked at the bottom of the LibreOffice window, just above the Status Bar.
- If the Find toolbar is not visible,
- **View > Toolbars > Find** or **Edit > Find** on the Menu bar or by pressing **Ctrl+F**.

- To use the Find toolbar, click in the box and type your search text, then press Enter to find the next occurrence of that term. Click the Find Next or Find Previous (arrow) buttons as needed.

Using the Find and Replace dialog

To display the Find and Replace dialog use any of the following methods:

- Use the keyboard shortcut **Ctrl+H**
- Choose Edit > Find and Replace on the Menu bar.
- Click the Find and Replace button on the Find toolbar.

Moving quickly through a document

Writer provides ways to move quickly through a document and find specific items, including:
