

Chapter-7 E-mail, Social Networking & E-Governance Services

- Electronic mail (email or e-mail) is a method of exchanging messages ('mail') between people using electronic devices.
- Invented by Ray Tomlinson, email first entered limited use in the 1960s and by the mid-1970s had taken the form now recognized as email.

- The structure of email address: Every email address has two main parts.

account_name@ domain name.com

Domain name:

This part of the email address is the name of server that hosts your emails. It is not necessary that the domain name would always be of a com kind. It can be anything from the Standard list of domain extension (eg, .org, .net, gov, .co.in etc.)

Account name (or username)

An email hosting server may host emails for one person -or millions of persons.it is name of user, that will be unique.

Note –

- E-mail addresses are not case sensitive . It means you can write your email in any case.
- Account Name not be longer than 64 characters.

Mailbox:

Mailbox is the container which contains all the email sent & received to a certain email count. It has a lot of folders which differentiate the email sent, received, junk, spam or deleted.

Inbox- :

Inbox is the place where all the incoming emails are stored and can be accessed through. As the name implies of inbox, this behaves like the same. It lists the email received into a relational table sorted according to the date

Outbox- : Outbox is place where all the sent data are stored until it is not fully sent. There is also a section named Sent Mail which contains the list of fully delivered emails.

Draft-:

It is place where messages composed but, not sent and even not queued to be sent. In other words, whatever messages we compose and save it is stored.

Junk- :

It is place where fake and spam kind of mail which contain virus, malware, spyware or do stealing data kind of activity, is stored. The email client application analyzes and sorts which to put in. Inbox and which to junk.

- Sent Items -It is a place where all delivered mails are listed.
- Deleted items: It is the place in Mailbox where all the deleted emails are stored to Items which you can reuse, send, forward or print, depends.

Vital Terms for sending an E-mail

- To -it is the section in which we write the receiver email addresses.
- CC (Carbon Copy) - in this mail recipient of the mail also know about the other recipient of the mail.
- BCC(Blind Carbon Copy)-Same as CC but recipient does not know the name of other recipient.

Unsolicited bulk mail

UBE (Unsolicited bulk mail) is email sent to large numbers of recipients without their knowledge or consent, often advertising commercial products or services.

SPAM

Email spam, also referred to as junk email, spam mail, or simply spam, is unsolicited messages sent in bulk by email.

A social network is a website that allows users to connect with other people and businesses online. Social networks typically have a similar format, where each business or person has their own profile, which provides personal or business details
