

IT Tools and Business System

Chapter :3

Presentation Package

Introduction

- Microsoft PowerPoint is a slide show presentation program developed by Microsoft.
- PowerPoint is simple, flexible and powerful tool for creating professional-looking slides.
- PowerPoint presentation provides various views and tools the user can use to build a presentation that includes words, graphics and media.
- Presentation package present information like business proposals, reports and plans in an effective and attractive manner using slides through presentations.

Elements of Power point

Elements

- **Slide**
- Slide is a working area of the power point presentation.
- **Navigation Pane**
- By default, thumbnails of the slides are shown here allowing for quick access of a slide, rearranging order of slides, and inserting/deleting slides.
- **Slide and Outline Tab**
- Slide tab is a main area. It shows the current slide we are working on.
- Switch to Outline View on the left instead of slide thumbnails.
- **Notes Pane**
- User can write presentation notes in this area.
- **Zoom Slider**
- Drag the Zoom slider left to shrink or right to enlarge slides.
- Click the Zoom In or Zoom Out button to zoom in or out by 10-percent increments.

Creating a Presentation

PowerPoint presentation can be created in two ways as follows

- Blank Presentation
- Using a Templates

Creating a Blank Presentation

- Click File menu then choose **New** and click **blank presentation** to open a blank presentation.
- Then Click **Create** to get a blank Presentation.

Creating a Presentation Using a Template

- Click File menu then choose New, it will navigate to an Available Templates and themes window.
- The Templates pane will display on the right side of the window with a variety of different templates to choose from.
- Select Sample templates option and choose any slide design from it.
- Then click Create button to create a new presentation with templates.

Views in Presentation

- To see slides in different views, use View button options which is available at left corner of the screen.

Normal View

- Normal View is also commonly known as Slide View.
- It is the main working window in the presentation.
- The slide is shown full size on the screen.

Slide Sorter View

- Slide Sorter View is a window in PowerPoint that displays thumbnail versions of all the slides, arranged in horizontal rows.
- This view is useful to make global changes to several slides at one time.
- Rearranging or deleting slides is easy to do in Slide Sorter view.

Notes Page View

- Notes Page View shows a smaller version of a slide with an area below for notes.
- Each slide is created on its own notes page.
- The speaker can print these pages out to use as a reference while making his presentation.
- The notes do not show on the screen during the presentation.

Reading view

- In reading view, each slide fills the screen.
- The user cannot edit slides when working in Slide Show view.
- The user can use this view to preview a presentation and to deliver it to an audience.

Working with slides

- If user wants a different layout, in the **Home tab click New Slide or Layout option from Slides group, click one of slide to type text.**
- After opening a presentation, in the presentation window click on title placeholder.
- The cursor will change to an I-beam. This pointer appears whenever the user enters or edits text.
- The title placeholder is outlined to indicate that it has been selected.
- Type the title.
- The text will automatically be center aligned within the title placeholder.
- Click outside of the title placeholder to view the title user have typed.
- For adding subtitle do the same as start with click on subtitle placeholder.

Adding a new slide

- The new slide can be inserted after the current slide or in the position where the mouse was clicked.
- There are several equivalent ways to add a slide to a presentation
- Under **Home tab select New Slide** option from Slides section.
- On the Slides or Outline pane right-click and select **New Slide from the pop-up menu (works in Normal view)**.
- Right-click on the main work area while in Slide Sorter view (which present in the status bar) and select **New Slide from the right click pop-up menu**.

Changing a Slide Layout

- Layout refers to the arrangement of the text and objects on a slide. A layout contains placeholders, which holds text, such as title, bulleted lists, and slide content, i.e., tables, chart, picture, shape, and clipart. Each time you insert a new slide, you can choose a layout that matches your requirement. You can change the layout of the existing slide.

Step:

- Click the View tab. Select the Slide Sorter view button in the Presentation Views group.
- Select the slide whose layout you want to change
- Click the **Layout** button in the **Slides group** on the **Home Tab**.
- The layout drop-down menu will open with various layout. Select any slide layout as required.
- The content on the slide will accommodate accordingly.

Rearranging Slides

- If user insert slides from another presentation into the current presentation and need to rearrange the slides into the order that most effectively communicates the message in slides of the presentation.
- This is done using the Slide Sorter View, where user can drag one or more slides from one location to another.
- To rearranging slides in a presentation, do the following.
- In Normal view, on the pane choose the Slides tab, click a slide to move and then drag it to the new location.
- To select multiple slides, click a slide and then press and hold Ctrl key while user click each of the other slides that user want to move.
- In the Slide Sorter View, drag the slide from the position to change and drop where to place.

Deleting Slides

There are three ways to delete a slide in a presentation.

- Select the slide then press **Delete** key to delete the slide.
- Select the slide in the Slide Sorter View (which is present in the status bar) and press the Delete key to delete a slide.
- Select the slide that user wants to delete and then Right click and click **delete slide** from the list.

Applying a Theme/Template

- The existing slide can be beautified using Templates, which are inbuilt design files for creating a presentation. Template include pre-designed layouts, backgrounds, color schemes, etc.

Step

- Open a slide of a presentation. Click the design tab, go to the themes group, move the mouse over a theme. It is reflected on the slide. Select any one.
- Right click on the selected theme. A shortcut menu appear, Select required open such as (Apply to all Slide, Apply to selected Slide or set as default theme)

Slide Master

- The Slide master is an element of the design template that stores information about the template, placeholder size, position of the text or objects, bullet style, background design, color scheme and header and footer.
- The slide master page consists of two placeholders:
- **Slide Title Placeholder** : it is the first placeholder for the title of the page. It contains a title. You can move the title placeholder anywhere on a slide.
- **Body Text Placeholder** : it includes general objects, such as text with bullets, charts, picture, and much more.
- Step
- Click the **Slide Master** button in the presentation **Views group** on the **View Tab**.
- Modify the Slide design and content formatting as required.
- Save the Slide and Switch to Normal View.

Drawing Objects

- PowerPoint allows user to draw any shapes and format the shapes as their needs.
- There are two ways of drawing as follows
 - Under Home tab, user can use Drawing section to draw and format the drawing.
 - Otherwise, Format tab under Drawing Toolbar is used for drawing.
- Format tab consist of 5 sections as follows.
 - Insert Shapes
 - Shape Styles
 - WordArt Styles
 - Arrange
 - Size

- **Insert Shapes**

- User can use Insert Shapes section to draw any required shapes and user can also Edit Shape and add Text Box.

- **Shape Styles**

- In the Shape Styles section, user can change the style of the shape, shape color, outline color and Shape effects.

- **WordArt Styles**

- In the WordArt Styles, user can change the text style, text color, text outline color and text effects.

- **Arrange**

- Arrange section allows user to change the position of the shapes like Bring to Front, Sent To Back, Align, Group the shapes and Rotate the shape for required Angle.

- **Size**

- Size section allows user to change the height and width of the shape using the up and down arrow in the box.

Header & Footer

- Power point provides automatic layout options to customize these fields.

Step:

- Select Header footer button from Text group on Insert tab.
- The Header footer dialog box will appear, select the element you want on your slide .By default Slide tab is selected .
- Click on **Apply To All** or **Apply** button as required.
